

PROCLEAN[®]

COMMERCIAL DRAIN CARE PRODUCTS

THE PROCLEAN FAMILY OF DRAIN CARE PRODUCTS

The best way to maintain your drain!

ProClean offers a complete line of commercial drain care products that are useful in many businesses including hotels, restaurants, apartment complexes and more. Our drain care products are designed to treat the whole plumbing system, and not just target a problem area. Also, our products have been approved for use with several municipalities because it is a natural product and does not emulsify down the drain line. ProClean drain care products can help you stay open for business and avoid plumbing issues which can interfere with your everyday operations.

ProClean Concentrated Drain Cleaner

This is not a chemical clog remover, but a natural, biological drain maintenance product that releases nontoxic bacteria to continually absorb grease and organic buildup in drain pipes.

Safe for all kitchen sinks, bathroom sinks, bathtubs, showers, laundry drains and floor drains, ProClean Concentrated Drain Cleaner contains no solvents, acids or caustic ingredients and will not harm your drains – copper, PVC or iron – regardless of how often it is used. A single two-ounce treatment lasts four weeks.

Lift Station Grease Dissolver

Specially made for use in higher flow systems like lift stations or wet wells where organic waste buildup can cause problems. ProClean Lift Station Grease Dissolver Block uses a safe, naturally occurring bacteria designed to handle difficult organic waste problems - it's environmentally friendly and non-toxic. The Lift Station Grease Dissolver gradually dissolves over a 30-45 day period of continuous treatment in 40,000 to 200,00 GPD systems.

Drain Line & Grease Trap Treatment

ProClean Drain Line & Grease Trap Treatment contains specially adapted bacteria that degrades the greases, fats and long-chain fatty acids that can cause blockages in commercial drain lines. It's an ideal solution to common problems in restaurants or food service operations and will reduce the need for grease trap pumping. It eliminates foul odors as it breaks down grease into water and carbon dioxide.

Time Flow Meter

To accurately dispense ProClean Drain Line & Grease Trap Treatment or Sugar Residue Digestant, install a Time Flow Meter on site. This microprocessor controlled pump dispenses the exact amount of product needed to keep the biofilm active and working. You can program up to 24 cycles per day, seven days a week. A battery backup ensures proper flow even when power is out.
