

PRO**CLEAN**
CONCENTRATED

DRAIN CLEANER

HELPS MAINTAIN YOUR DRAIN

ProClean Concentrated Drain Cleaner

is an exclusive formula specifically designed to coat the inside of pipes and keep waste from building up and eventually clogging drains. It's the best way to keep clogs from reoccurring.

- Keeps drains free-flowing longer
- Treats the whole plumbing system, all the way down the line – not just the trap
- Specifically formulated to break down long-chain fatty acids – the number one cause of drain clogs
- Concentrated – one gallon makes 64 treatments. That's years of treatments when used monthly as directed
- Commercial strength – available only from professional service technicians
- Safe for the environment – no harsh, toxic chemicals

PROCLEAN®

Using **ProClean Concentrated Drain Cleaner®** on a regular basis provides you with a natural biological tool that releases nontoxic bacteria to absorb the grease and organic buildup in your pipes and convert them into harmless byproducts: carbon dioxide and water. In addition, a bio-film coats the inside of your drain pipes and continues to consume the organic wastes through this bacterial action until the waste is gone.

ProClean Concentrated Drain Cleaner contains no solvents, acids or caustic ingredients. A single two-ounce treatment of Drain Cleaner lasts four weeks. During this time, a refreshing scent deodorizes your drain pipes as the bio-film works to remove the waste that is the source of unpleasant odors.

ProClean Concentrated Drain Cleaner will not harm your drains – copper, PVC or iron – regardless of how often it is used. It is safe for all kitchen sinks, bathroom sinks, bathtubs, showers, laundry drains and floor drains.

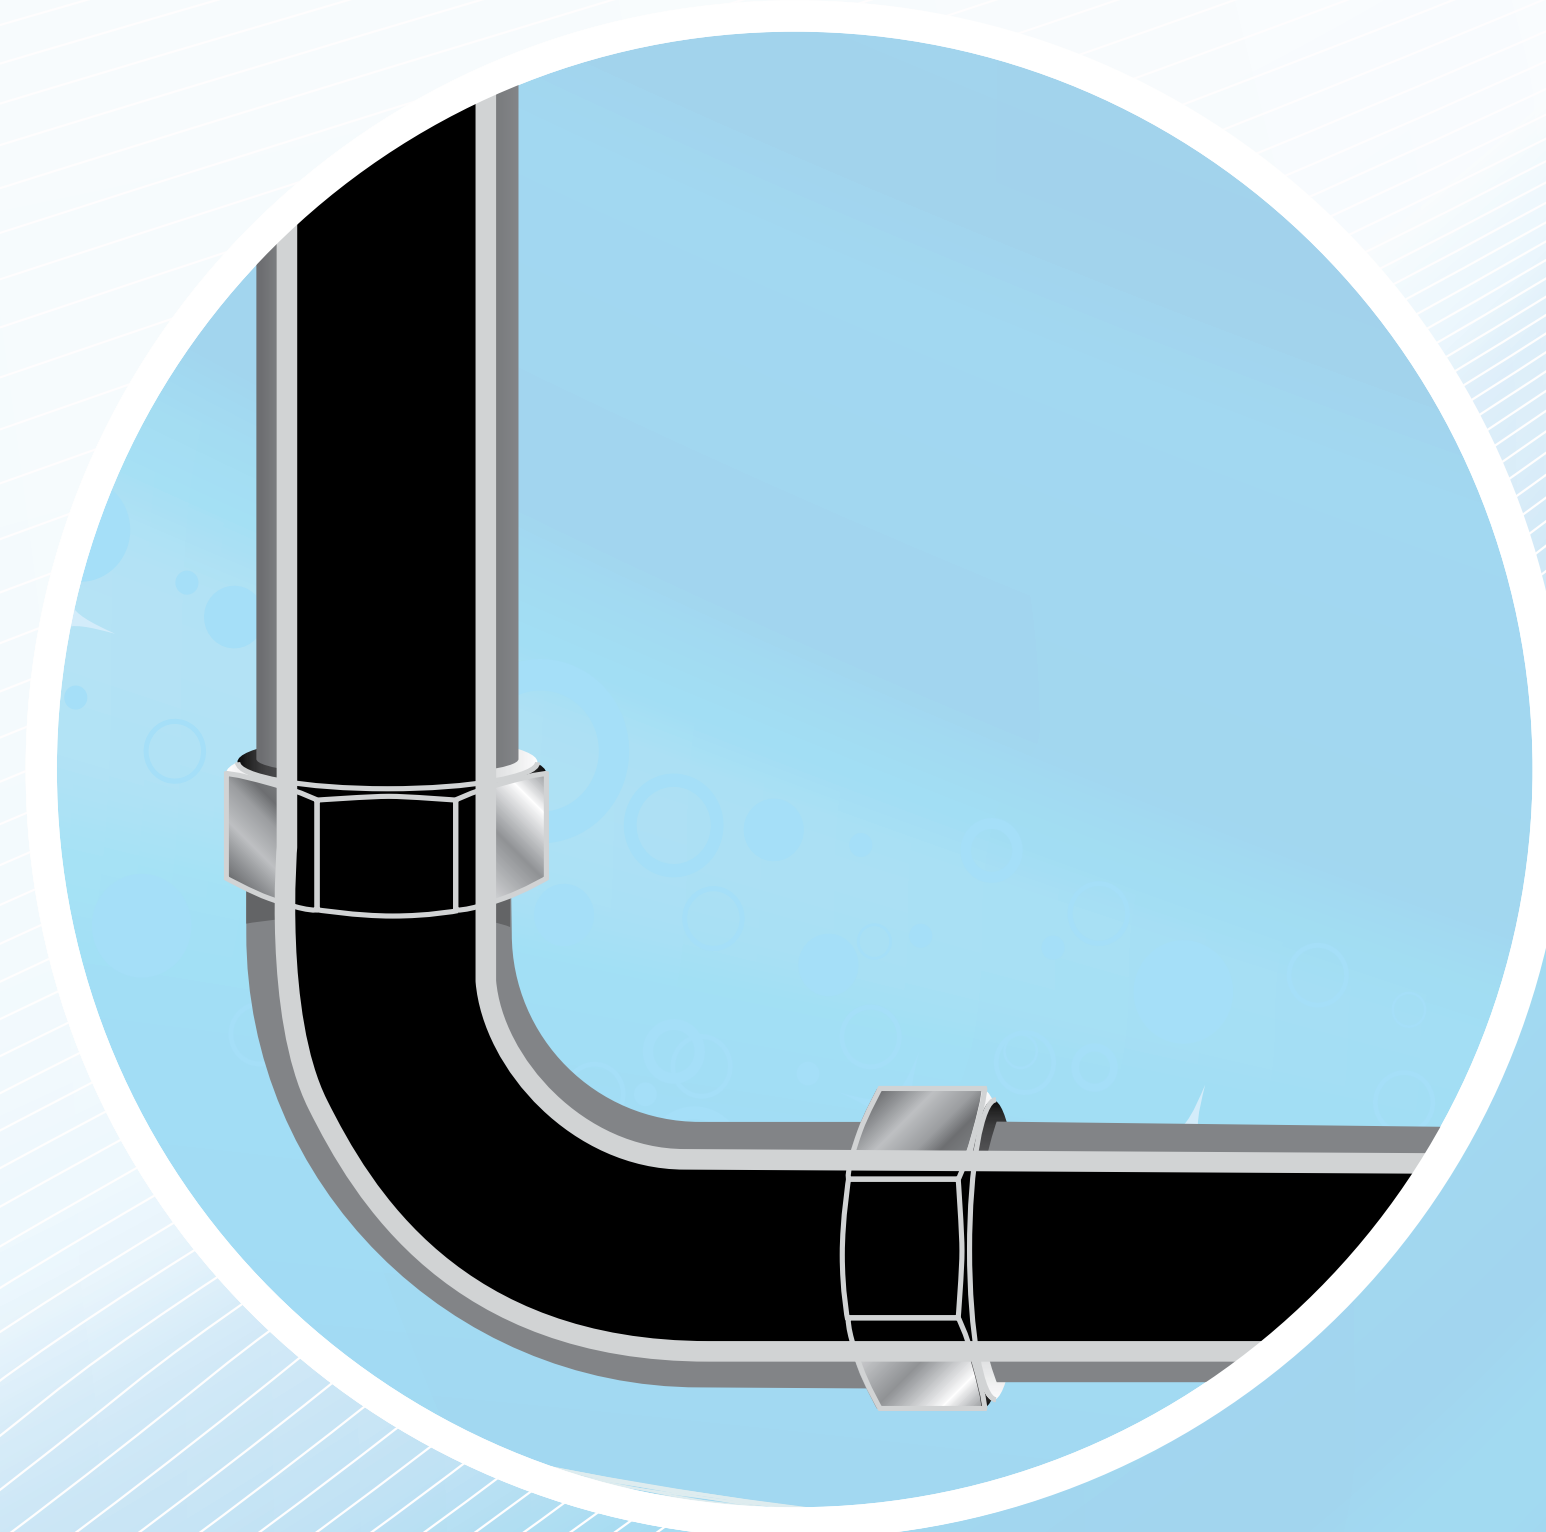

The next time you have your drains professionally cleaned by your service technician, be sure to request a bottle of ProClean Concentrated Drain Cleaner and use it regularly as a preventative maintenance aid to keep your drains clear and free-flowing.

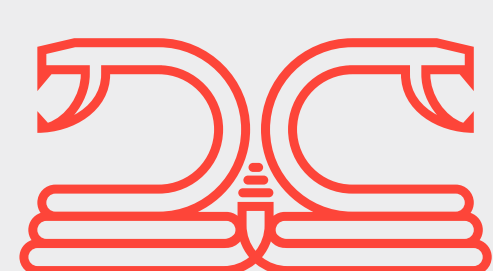

Your drain is clogged. You call for help from a professional. Your drain is cleaned, as good as new, and that's the way you want to keep it.

Unfortunately, over time your drain will build up with food, grease, hair and other household waste. Eventually, the drain will flow slowly or stop completely.

Treating your drain as directed with ProClean Concentrated Drain Cleaner will help drains stay clear longer. It's easy to use and economical.
